

AWS Certified Cloud Practitioner (CLF-C02)

Most Important Services for Exam

This document contains the most important AWS services and topics frequently asked in the AWS Certified Cloud Practitioner (CLF-C02) exam.

Compute Services

Service	Important Topics
Amazon EC2	Launching instances, instance types, Security Groups, AMI, Auto Scaling, pricing models
AWS Lambda	Serverless computing, event-driven execution
Elastic Load Balancing	Traffic distribution, ALB, NLB, high availability
Amazon ECS	Container management basics
Amazon EKS	Managed Kubernetes service

Storage Services

Service	Important Topics
Amazon S3	Buckets, object storage, static website hosting, storage classes
Amazon EBS	Block storage attached to EC2
Amazon EFS	Shared Linux file system

Database Services

Service	Important Topics
Amazon RDS	Managed relational database, Multi-AZ, Read Replicas
Amazon Aurora	High-performance relational database with up to 15 replicas
Amazon DynamoDB	NoSQL serverless database
Amazon Redshift	Analytics and data warehouse

Networking Services

Service	Important Topics
Amazon VPC	Public/private subnet, route tables, internet gateway
Amazon Route 53	DNS management
Amazon CloudFront	CDN and edge locations
AWS Direct Connect	Dedicated AWS connection

Security Services

Service	Important Topics
AWS IAM	Users, Groups, Roles, Policies, MFA
AWS KMS	Encryption key management
AWS Shield	DDoS protection
AWS WAF	Web application firewall
AWS Secrets Manager	Secure secret storage

Monitoring & Management

Service	Important Topics
Amazon CloudWatch	Metrics, logs, alarms
AWS CloudTrail	API activity tracking
AWS Trusted Advisor	Optimization and recommendations

Messaging Services

Service	Important Topics
Amazon SNS	Pub/Sub notifications
Amazon SQS	Message queues and decoupling

Billing & Pricing

Service	Important Topics
AWS Cost Explorer	Cost analysis
AWS Budgets	Budget alerts and spending limits

Most Repeated Services in Exams

Priority	Service
■■■■■	IAM
■■■■■	EC2
■■■■■	S3
■■■■■	RDS
■■■■■	VPC
■■■■	Lambda
■■■■	CloudWatch
■■■■	Route 53
■■■■	ELB
■■■■	DynamoDB

Important Comparisons for Exam

- S3 vs EBS vs EFS
- RDS vs DynamoDB
- CloudWatch vs CloudTrail
- Security Group vs NACL
- Scaling vs Load Balancing
- Public vs Private Subnet
- Vertical vs Horizontal Scaling
- Multi-AZ vs Read Replica
